

Facility Planning and Material Handling

Unnecessarily transporting materials and equipment not only wastes time and effort, but creates the opportunity for injury. A well-designed facility can help prevent this and make your organization more efficient and productive while reducing employee injuries associated with material handling. EMC can help you strategically locate tools, equipment and storage to maximize space, minimize waste and promote safety.

What slows down your productivity?

Inefficient material flow • Crowded aisles • Confined storage areas • Overly tight machine layout

How should we?

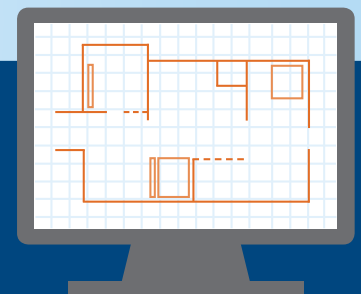

How can we?

How many?

Sample Facility Planning Questions

- How many storage racks can we fit in the new warehouse we're building?
- How should we rearrange our current equipment to best accommodate a newly-acquired punch press?
- We're planning a new building addition. Before we call a contractor, how can we most effectively use the new space?

EMC's Easy Facility Planning Process

- 1 EMC assesses your current layout and challenges
- 2 Using computer-aided design (CAD) software, consultants propose the best layout
- 3 Layout is revised with your input
